

Gamma's RXPro Software Gaining a Stronger Foothold in Curacao

Gamma IT Solutions developed RXPro, a complete AIS system for the distribution of prescription and non-prescription medicines. Since then, the pharmacy software has been making inroads in different markets, with Gamma adapting the software for each specific market. RxPro was first introduced in

Curacao last year at Botika Mahuma, and Gamma is proud to announce that two more pharmacies in Curacao are now using the software, namely Botika Barber and Botika Stakamahachi.

Gamma's project manager Koos Veel commented, "RXPro is a win-win software. It

benefits both the pharmacy and the pharmacy's clients. So when we first introduced RXPro to Curacao, we knew it wouldn't be long before more pharmacies would adopt the software. Actually, we already have a commitment with four more pharmacies in Curacao that will implement the software soon."

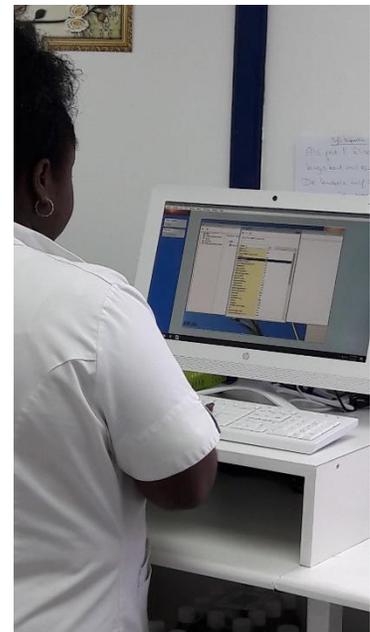

Gamma initially developed RXPro for the Aruban market, but has modified the software to specifically meet the needs of pharmacies and clients in Curacao. RXPro features several modules that directly benefit clients, including a medication control application that manages the distribution of medication based on six criteria, ensuring the safety of all patients.

Likewise, a number of modules guarantee greater efficiency for pharmacies, such as the inventory control module; a built-in "Suggested Purchase Order" module that offers pharmacists a convenient

way to make regular purchase orders; a module that handles the logistics of magistral preparations, including automatic cost calculation and automatic deductions from inventory; and a billing module that automatically handles monthly declarations to Curacao's health insurance agency. Other features include barcode-based scanning and searching, role-based access control, continuous synchronization of data for pharmacy groups, and report and audit trail generation.

Veel adds, “We developed RXPro using modules, giving us the ability to simply add more modules to meet the ever-changing needs of both pharmacies and clients. For this reason, when pharmacies adopt the software, they are investing in a product with incredible longevity, and we are proud that more pharmacies in Curacao are choosing to make this wise investment.”
