Botica Paradera Becomes 12ᵗʰ Pharmacy to Adopt RXPro

Local software developer Gamma IT Solutions recently developed a robust pharmacy software program, called RXPro. It is a complete POS system for the distribution of prescription and non-prescription medicines, adapted specifically for the local market. With Botica di Servicio's 5 pharmacy locations and Visser's 6 locations already on board with the software program, Botica Paradera became the 12th pharmacy on the island to purchase RXPro, setting the stage for better service for its clients.

RXPro offers a wide spectrum of features that directly benefit clients. The software program provides the complete histories of all patients. It also contains an index of all the medications registered with

AZV, which is updated monthly. An especially important feature is the medication control application, which controls the distribution of medication based on 6 points—age, medicine interactions, double medications, contraindications, dosage, and allergies— ensuring the safety of all patients.

Several modules within RXPro bring greater efficiency to pharmacies. The inventory control module eliminates time-consuming manual inventory checks for the ordering of products. A built-in "Suggested Purchase Order" module, based on a custom formula that optimizes inventory, gives pharmacists a convenient way to make regular purchase orders. Another module handles all matters regarding magistral preparations, including automatic cost calculation and automatic deduction of ingredient quantities from inventory. A billing module automatically handles monthly declarations to AZV. Other features include barcode-based scanning and searching, role-based access control, continuous synchronization of data for pharmacy groups, the ability to create an audit trail and generate reports, and more.

According to Frank Baks, Gamma's director of business development, "RXPro is a powerful, user-friendly program that will enable pharmacies on the island to bring a higher level of service to their customers. We're delighted that Botica Paradera has come on board, and we hope to add the remaining 5 pharmacies on the island to our client base."

RXPro will go live August 1 of this year. Gamma IT Solutions is currently busy with the installation of the software and training. The company is also busy developing additional modules that will be added to the software program in the future.
